Workshop Preparation: Search Strategies

Research Question: Which **[E] criteria, assessment tools or algorithms** are used to decide **[O] who is eligible for long-term care, and at what care level**, including for **[P] people leaving intermediate or post-acute care**? And **[O] what evidence supports them**?

	PECO
P	People of any age assessed for LTC, including people leaving intermediate/post-acute care (IMC)
E	Criteria, assessment tools, grading systems or algorithms used to decide LTC eligibility or care level
C	*N/A*
O	**Main:** the domains assessed, the decision rules or cut-offs, and the eligibility or care-level result. **Supporting:** reliability, validity, and later outcomes (LTC entry, decline, death)

Selected Preliminary Papers → MAPPED to PECO

#	Paper	P (who)	E (tool)	O (what it reports)
1	Tsutsui 2005	Older people, Japan	National certification algorithm	Care level assigned
2	Fries 2002	Older and disabled adults applying for public home care, US	MI Choice screen	Eligible or not, and level of care
3	Fries 2004	Same as #2	Telephone vs in-person screen	Agreement between the two
4	Kim 2013	Older LTC insurance users, home + facility, Korea	One part of Korea's certification tool	Validity against care time
5	Tsugihashi 2021	Home-care patients, Japan	Certified care levels	Validity against real function
6	Van Doren 2021	Adults of all ages, Belgium	BelRAI (decides care-budget eligibility)	Scores vary by assessor
7	Hirdes 2008	Home-care clients, Canada	MAPLe priority algorithm	Priority; later nursing-home entry
8	Bolster-Foucault 2023	Hospital-to-home clients, Canada	RUG-III/HC care-level classification	Care time explained

9	Turner-Stokes 1999	Rehab patients at discharge, UK	Northwick Park Care Needs Assessment	Weekly care hours needed
10	Takei 2008	Physical, intellectual and mental disability, Japan	Disability support-needs assessment	Type and amount of service
